Promoting student metacognition—teaching students to think about how they are thinking about biology and how they approach learning about biology—would seem to be a useful strategy in striving to reach these kinds of goals for students (NRC, 2000; D'Avanzo, 2003; Crowe et al., 2008). Below, I describe potential approaches to increasing ...

Genetic studies of human personality. Personality traits are the relatively enduring patterns of thoughts, feelings, and behaviors that reflect the tendency to respond in certain ways under certain circumstances (Roberts 2009 p 140). Strong phenotypic correlations have been reported over the years between personality traits and a wide array of psychopathological conditions (Khan et al. 2005 ...

Adaptation is an observable fact of life accepted by philosophers and natural historians from ancient times, independently of their views on evolution, but their explanations differed. Empedocles did not believe that adaptation required a final cause (a purpose), but thought that it "came about naturally, since such things survived." Aristotle did believe in final causes, but assumed that ...

Planned and unplanned migrations, diverse social practices, and emerging disease vectors transform how health and wellbeing are understood and negotiated. Simultaneously, familiar illnesses—both communicable and non-communicable—continue to affect individual health and household, community, and state economies. Together, these forces shape medical knowledge and how it is understood, how it ...
